SUMMARY

AI and Robotics student with hands-on experience developing AI applications, autonomous systems, UAV prototypes, and robotic systems.

EDUCATION

Indian School Certificate (ISC) – Class XII

Sacred Heart School, Moga, Punjab, India

Stream Non-Medical / PCM – Expected 2027

Indian Certificate of Secondary Education (ICSE) – Class X

Sacred Heart School, Moga, Punjab, India

92.8% – 2025

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML

AI/ML: Machine Learning, Deep Learning, Computer Vision, Explainable AI

Robotics: Arduino, Embedded Systems, Autonomous Systems, Robotics Programming

Tools: Git, GitHub, VS Code, PyCharm, Tinkercad

EXPERIENCE

SynerTech

Technical Lead

Led technical initiatives and delivered seminars to students on technology and robotics.

Technical Leadership Robotics Communication

Nexus-0x

Bug Bounty Lead & Design Lead

Led bug-bounty activities and managed visual design and digital content.

Cybersecurity Bug Bounty Design

Celesta

Lead Designer

Led visual design and creative work for a student-led astronomy organization.

Design Visual Communication Astronomy

SELECTED PROJECTS

HabitaX

Live Web App

Developed a physics-informed AI system for exoplanet verification and bio-potential assessment using machine learning, physics-based feature engineering, and explainable AI.

Python AI Machine Learning

Project Squirrel – VTOL UAV

Project Website

Designed a weather-resilient VTOL UAV for humanitarian aid and disaster response, including a deployable glider wing, protected electronics, waterproof actuators, and payload-delivery systems.

UAV Robotics Arduino Aerodynamics

Industrial Robotics Project

Designed and built a small-scale industrial robotic prototype involving system integration, control, and embedded programming.

Robotics Arduino Embedded Systems

Horizon – Parkour Game

Developed an original parkour game, contributing to UI design, interactive systems, and programming.

Game Development UI Design Programming

Neutral Sparks – Robotics Team

Member of a three-person robotics team developing multifunctional three-in-one robots. Worked on robotics, electronics, LCD interfaces, and embedded programming.

Robotics Arduino Embedded Systems Electronics

Gyroscope Robot

Developed a robotic prototype involving gyroscopic sensing, stabilization, and robotic control.

Robotics Sensors Arduino

ACHIEVEMENTS

IRC 2024 – Semifinalist **Robomech** – Award Recipient

AI Researcher – Shoolini University **Majic Books** –

Published an original short story and poem
