SUMMARY

Student focused on Artificial Intelligence, Robotics, and Computer Science, with hands-on experience developing AI applications, robotics systems, autonomous prototypes, and software projects. Interested in combining programming, engineering, and intelligent systems to solve practical problems.

EXPERIENCE

Nexus-0x

Designer – Cybersecurity Organization

Designed visual content and creative material for a student-led cybersecurity organization, contributing to digital communication and visual identity.

Design Visual Communication Cybersecurity

SynerTech

Robotics Organization

Contributed to robotics development and engineering projects, working across hardware and software components to develop practical robotic systems.

Robotics Arduino Embedded Systems

Celesta

Astronomy Organization

Contributed to astronomy-focused technical initiatives, projects, and events combining technology and scientific exploration.

Astronomy Technology Project Development

Majic Books

Independent Publishing

Authored and developed an original book under the Majic Books name, contributing to its creative development and publication.

Writing Publishing

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML

AI / ML: Artificial Intelligence, Machine Learning, Deep Learning, Computer Vision

Robotics: Arduino, Embedded Systems, Autonomous Systems, Robotics Programming

Tools: Git, GitHub, PyCharm, Tinkercad, VS Code, BlueJ

EDUCATION

Indian School Certificate (ISC) – Class XII

Sacred Heart School, Moga, Punjab, India

Stream Non-Medical / PCM – Expected 2027

AWARDS

- **Academic Achievement** – First rank in the Class XI annual examination.
- **Academic Achievement** – Third rank in a Class XII unit examination.
- **Technical Certifications** – AI, programming, and robotics certifications to be added.
- **Competitions** – Participation in technology, engineering, robotics, and AI-focused competitions.

OTHER PROJECTS

Project Squirrel – VTOL UAV

Project Website

Designed a weather-resilient VTOL UAV for humanitarian aid and disaster response. Developed a deployable glider wing, protected electronics, waterproof actuators, and concepts for reliable payload delivery in adverse weather.

UAV Robotics Arduino Aerodynamics

Habitax

Link to be uploaded

Developed an AI-based system focused on intelligent assistance and interaction, applying programming and artificial-intelligence concepts to create a practical user-oriented system.

Python Artificial Intelligence Machine Learning

Industrial Robotics Project

Link to be uploaded

Designed and built a small-scale industrial robotic prototype, working on system integration, control, and embedded programming.

Robotics Arduino Embedded Systems

Horizon – Parkour Game

Link to be uploaded

Developed Horizon, an original parkour game, with responsibility for the user interface and contributions to in-

teractive design and development.

Game Development

UI Design

Programming

ADDITIONAL PROJECTS

- **Gyroscope Robot** – Robotics project involving gyroscopic sensing and robotic control.
- **Neutral Sparks** – Independent project combining programming and intelligent-system concepts.

RESEARCH

- Explored applications of **Artificial Intelligence** and machine learning through independent technical

projects.

- Investigated **computer vision** and intelligent-system applications.
- Explored autonomous robotics and engineering approaches for **weather-resilient UAV systems**.

ACTIVITIES / INTERESTS

- **Nexus-ox** – Cybersecurity and design
- **SynerTech** – Robotics and engineering
- **Celesta** – Astronomy and technology
- **GADS** – Debate and global affairs
- **Sports** – Football and Tennis
